### TECHNIQUES FOR **TEEN** DRIVERS

We must all confront the unthinkable: The numbing loss of our teenagers in automobile accidents caused by their inexperience and the awful consequences of their too-innocent errors in driving judgment. Beginning drivers simply have not had time to learn how to react correctly to the surprising things automobiles do under extreme conditions.

The Road Skillz DVD is a start, and a good one. It is aimed directly at 16- through 25-year-old new drivers, and is a fully professional piece of work showing re-creations of accidents, as well as comparing successful and disastrous reactions to those sudden crises.

But this production carries a big difference: The illustrations and advice are offered by race drivers of proven skill and authority like young host Arie Luyendyk Jr. and Baja 1000 off-road champion Ryan Arciero, as well as veteran competitors Boris Said and Henri Pescarolo. Some of the topics covered are: hydroplaning, skidding, blind spots, fog and tire blowouts.

Will our young drivers look, listen and learn? Our polled group said yes; the contents are interesting, challenging, and a natural to live up Driver's Ed classes.

The DVD is available for \$19.95, with an English, French or Spanish soundtrack, at [www.roadskillz.com](http://www.roadskillz.com). —David W. Black
